Date: April 2015

Volume: 32-15

In a marketplace that has seen tremendous changes and concerns regarding increased costs given the weakening Canadian Dollar, the **proSeal™ roofing systems** has continuously strived to improve our products to ensure increased quality and performance.

We are pleased to announce that our 45 mil, 13' wide **proSeal™ C3** membrane has been increased to a 47 mil average thickness providing even greater long term performance.

The **proSeal™ C3** membranes regardless of mil thickness are now incorporating a redesigned woven reinforcement which utilizes a Kevlar® fabric from Dupont™ improving the membrane's performance for impact as well as redefining the overlap areas for mechanically attached roof systems, for increased strength and performance.

## ***429 Carmen's Way SSM required a workable Roofing Solution***

***proSeal™ C3*** 60 mil ***Negative Flow™*** roofing system being installed by ***Dynamic Roofing***.

The **proSeal™ Negative Flow™ roof system** utilizes specialized one way air vents to create a negative pressure (vacuum) to the underside the **proSeal™ roof system** securing it to existing roof system.

***An economical solution with long term performance.***
